A RICH HISTORY

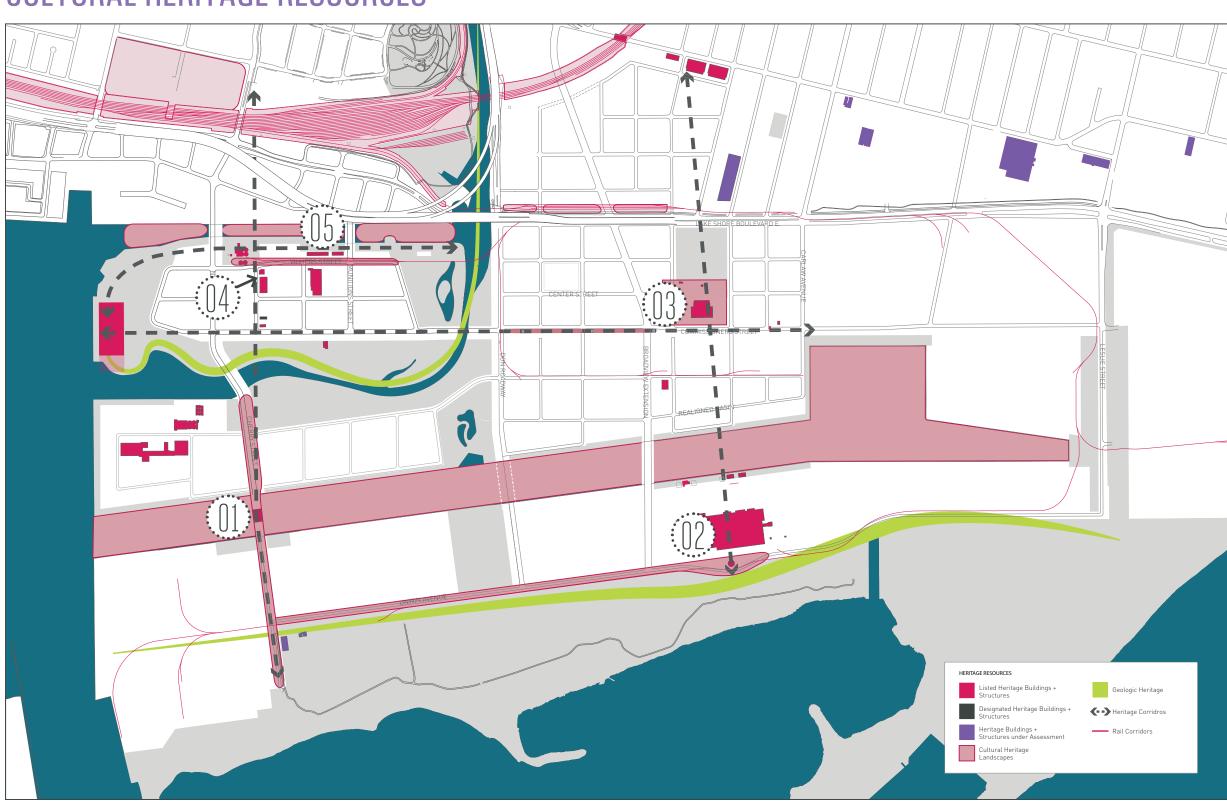

Heritage resources are given a **new life** as a key component of the **contemporary city**. The geological and industrial heritage are the **foundations to placemaking** in the Port Lands. Interpretation and commemoration of the Port Lands geological and pre-contact history will **enrich the evolving landscape**

ARCHAEOLOGICAL RESOURCES

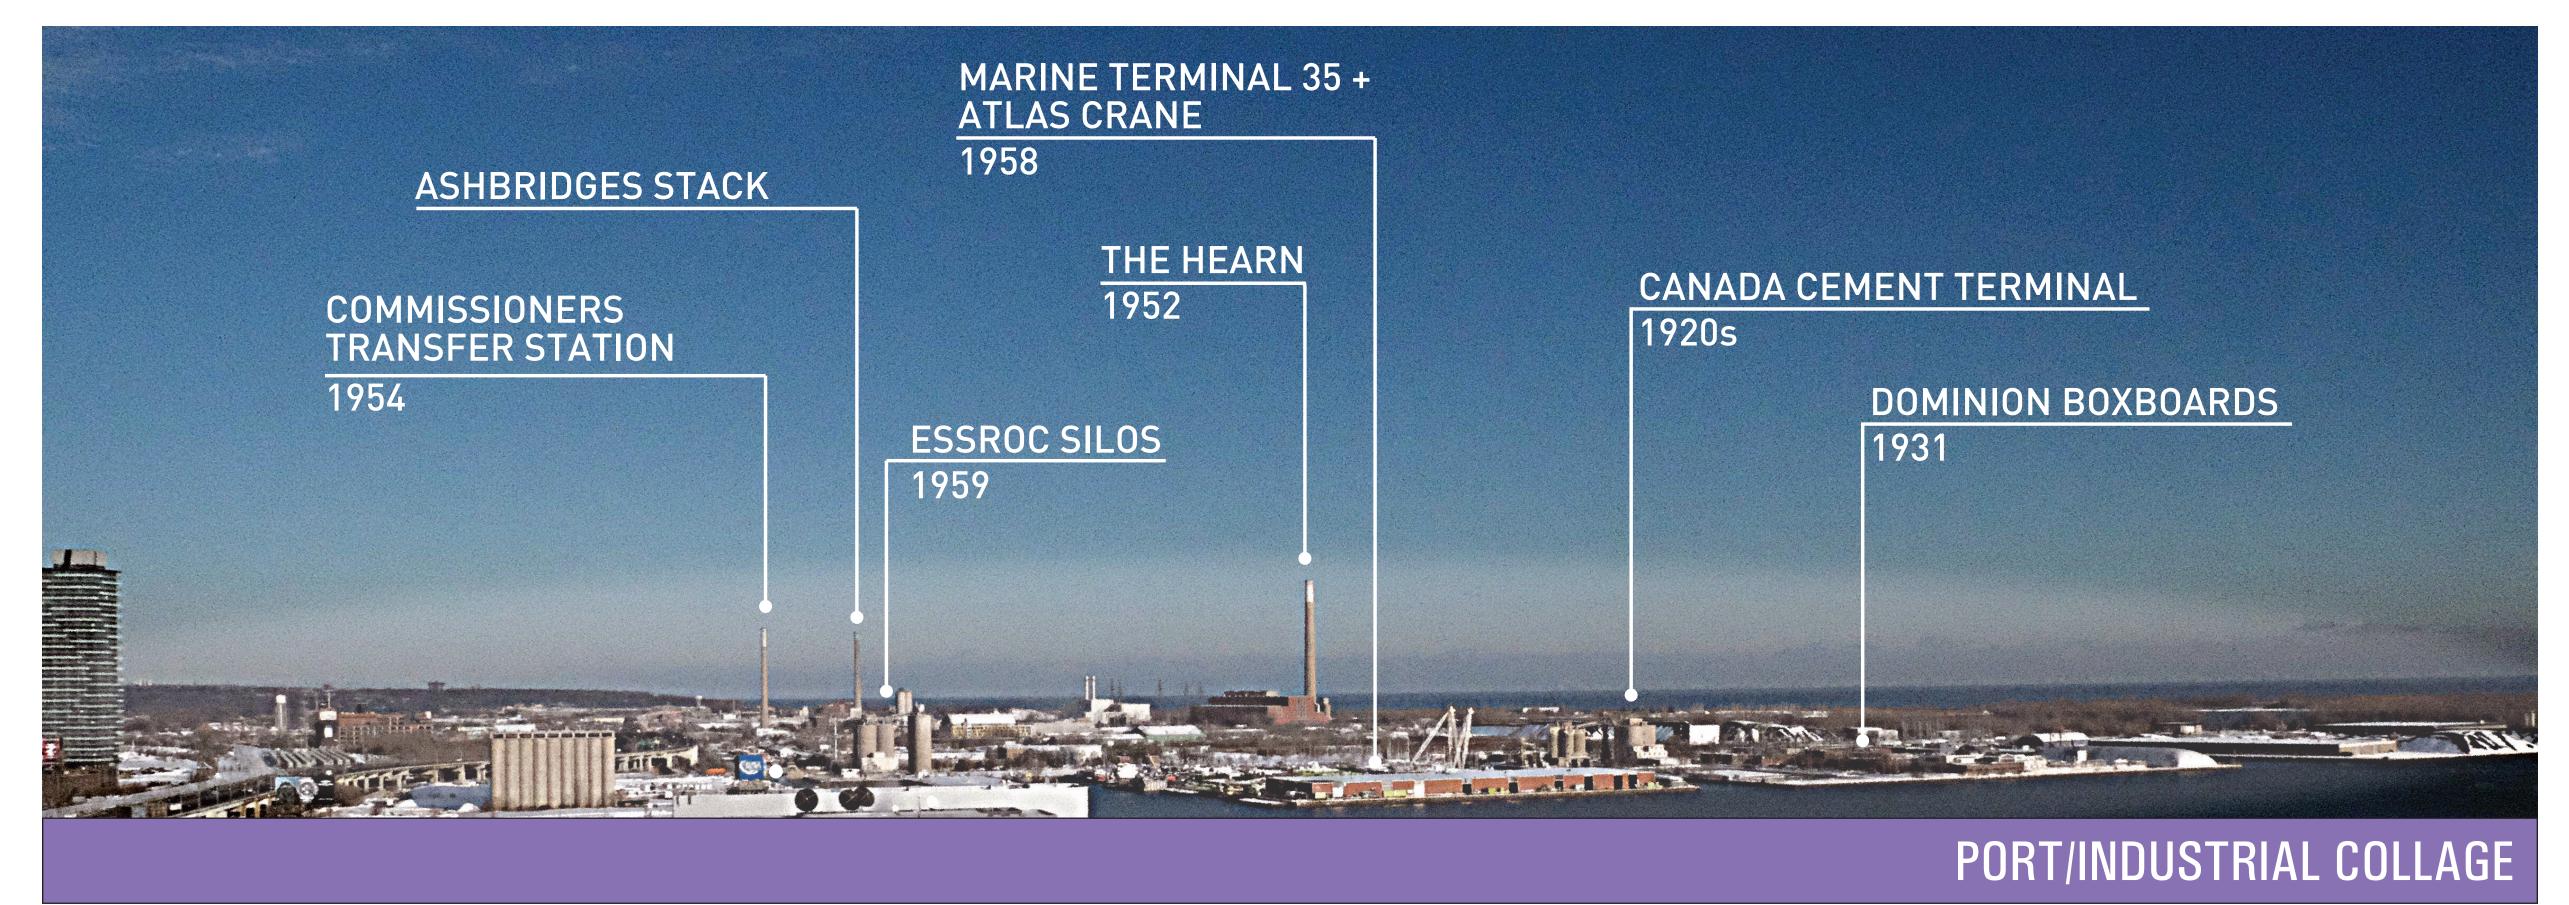

There are a number of potential archaeological resources in the Port Lands that will be appropriately interpreted and commemorated as the area evolves. The Don River originally emptied into the Asbridges Bay Marsh before entering the Inner Harbour and was hunting and gathering territory for First Nations. Starting in the 1870s, man-made interventions to the original geological formation began with the construction of breakwaters and finally with the filling in of the Marsh in the early 20th Century creating the Port Lands we know today.

CULTURAL HERITAGE RESOURCES

The Port Lands boasts an impressive collection of early and mid-20th century industrial buildings, structures and landscapes spanning three different waves of development - early 20th century port development, 1950s power and municipal developments, and St. Lawrence Seaway port expansion in the late 50s and early 60s. Planning in the Port Lands will include, at its heart, an enthusiasm for showcasing and adaptively reusing the many heritage and cultural heritage resources that give the Port Lands its unique identity and profile.

The Port Lands has a **remarkable collection** of dramatically scaled heritage buildings, cultural resources and existing and planned natural gems. **Preserving and showcasing views** of these assets, from a distance, along view corridors and across landscapes and waterways, will define the Port Lands' character and lend prominence to the landmarks around which the area will evolve. This will require **careful composition and massing** of development in the Port Lands

Views to the Port Lands

Post Card views will showcase a curated skyline that reinforces and celebrates the Port Lands' chimneyscape and scale and variety of heritage and natural assets viewed from destinations along the waterfront and from Tommy Thompson Park. Focused views are more intimate and help to visually connect different places, framing and reinforcing the importance of conserved assets. Focused views of the iconic Hearn and its stack will be protected down Carlaw Avenue and the newly created Broadview extension.

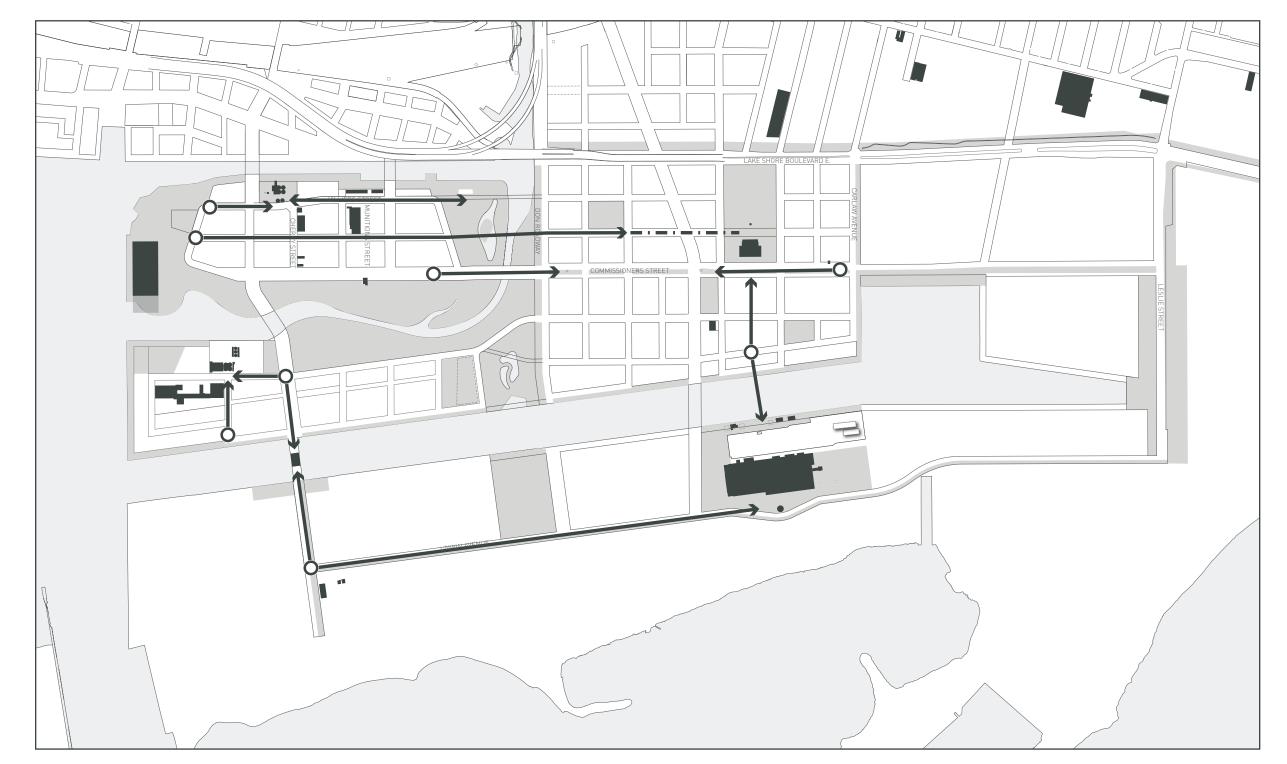

Landmark Views

The heritage resources and landmarks of the Port Lands are an important component of defining the character of the Port Lands. **Landmark** views within the Port Lands recognize that heritage and cultural assets will be centre pieces and have a strong presence in the area. View corridors along streets, across development blocks or important cultural heritage landscapes will ensure views to these artifacts and landmarks and preserve relationships between collections of assets where they currently exist.

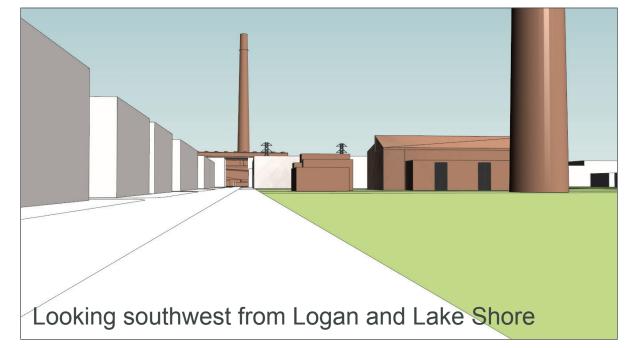

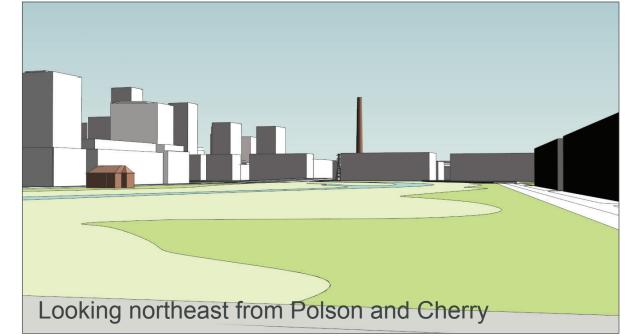

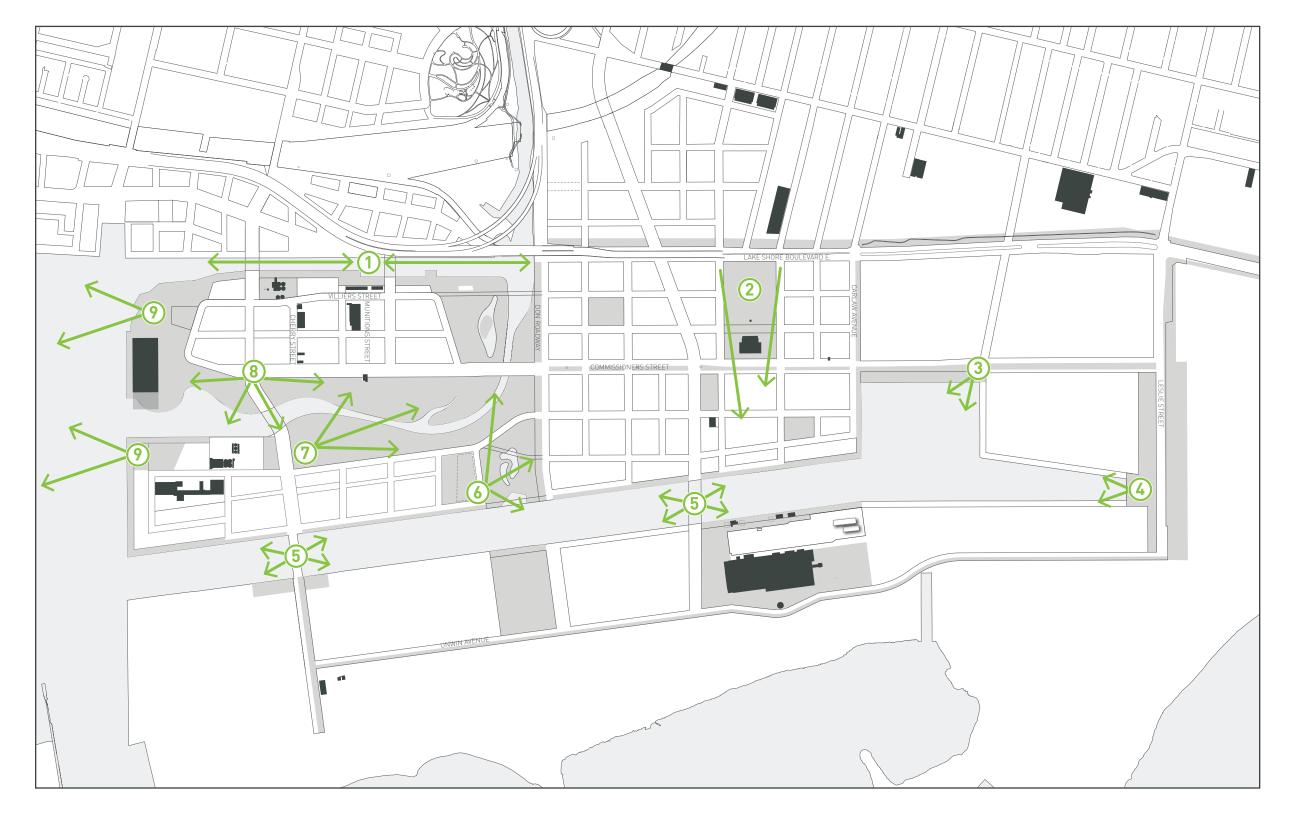

Scenic Views

The series of places in the Port Lands will be surrounded by broad landscapes and waterscapes, including the renaturalized mouth of the Don. These spaces will provide long, **scenic** views, capturing the contrasting character of places within the area, and showing off heritage and cultural assets that tell the evolving story of the Port Lands. Built form will be located and scaled to respect these features. Other areas will be transformed into remarkable, publicly accessible open spaces offering great vantages of the theatre of the Port Lands and city.

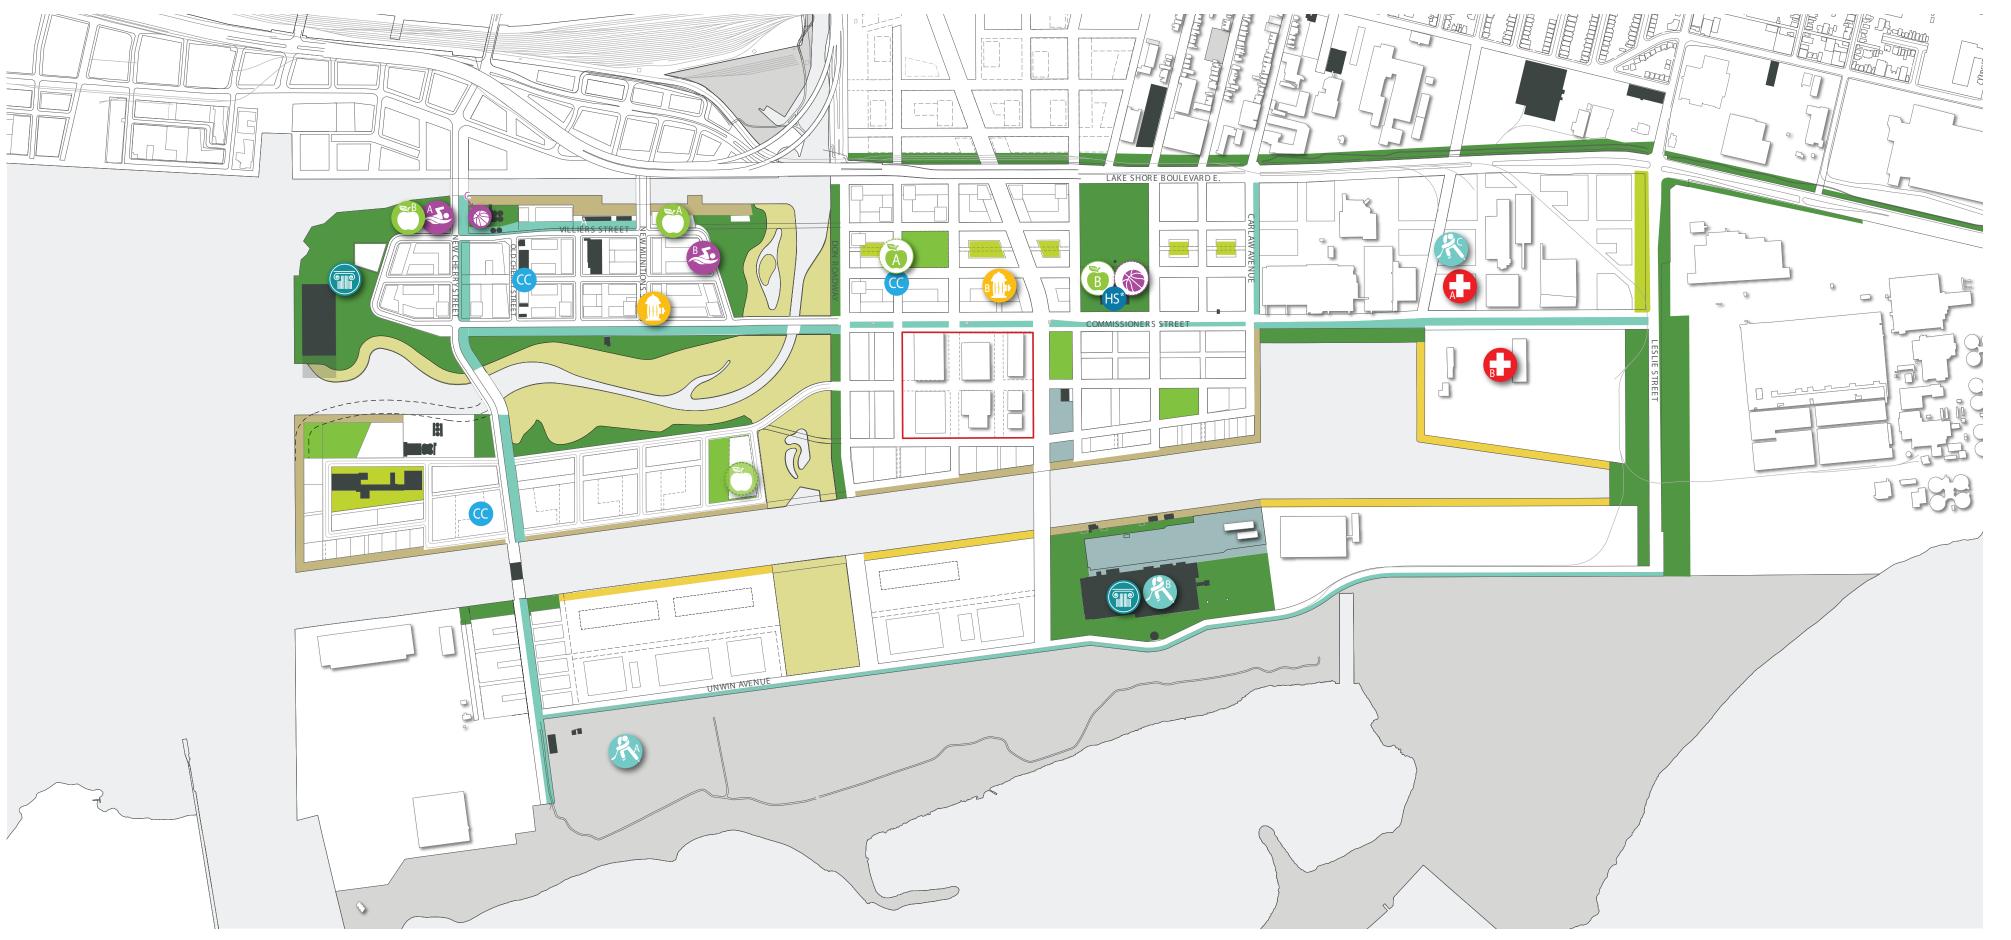

COMPLETE INCLUSIVE COMMUNITIES

The Port Lands is envisioned to be a place where people of all ages and abilities have safe and convenient access to community services and infrastructure needed in daily life. The Port Lands mixed-use precincts will have a variety of housing types and affordability for households of different sizes and incomes.

Community Infrastructure Principles

- 11 Ensure community infrastructure is geographically distributed across new communities.
- 12 Ensure timely provision of community infrastructure by strategically locating infrastructure within precincts.
- (13) Create clusters and activity centres:
 - a) Locate facilities in proximity to parks
 - b) Co-locate with other facilities or in mixed-use buildings
 - c) Capitalize on opportunities and assets

- Provide frontage on primary streets and ensure facilities have good visibility and access to pedestrian, cycling and transit facilities.
- Locate and design facilities to ensure compatibility with future neighbourhoods by ensuring compact urban form for new facilities and strategically locate regional facilities in non-residential areas.
- Consider redevelopment costs, future operational costs and innovative facility and service delivery models to ensure flexibility and adaptability over time.

Louise Station, CalgaryAffordable mixed-use building with integrated fire station.

Katharinen-Primary School, Hamburg A school and child care facility integrated in an affordable housing project with play space at grade and on the roof.

The Hub Library, Melbourne
Modern library and civic hub, with
flexible community space.

Manhattan Plaza Apartments, New York
An affordable housing complex that includes a rooftop playground and a pre-school facility.

City Centre Community Centre, Richmond, BC Community centre in a five tower residential and commercial mixed-use development.

- Villiers Island TDSB Elementary School

 A. Co-located with a Child Care Centre

 B. Co-located with a Small Community Recreation Centre
 - Co-located TDSB/TCDSB Elementary Schools with a Child Care Centre

 Film Studio District TDSB Elementary School Options
- Film Studio District TDSB Elementary School Option
 A. Co-located in a Mixed-Use Building
 B. Co-located in Expanded McCleary Park
- Protect for a future joint school site and required if residentia permitted in Polson Quay/South River in the future

COMMUNITY RECREATION CENTRES

- A / B. Small Community Recreation
 Centre (35,000 sq. ft)
 Indoor Pool (30,000 sq. ft)
 Multi-purpose space (5,000 sq. ft)
- C. Community Agency (20,000 sq. ft)
- Community Hub (60,000 70,000 sq. ft)

 Double Gynasium (20,000 sq. ft)

 Multi-purpose Space (10,000 20,000 sq. ft)

 Child Care Centre (7,000 sq. ft)

 Human Services Space (20,000 sq. ft)

MULTI-SPORTS COMPLEX OPTIONS (70,000 sq. ft) A. Lake Ontario Park

- Fire Station Options (10,000sq. ft)
 A. Villiers Island
 B. Film Studio District
 - Emergency Medical Services Options (10,000sq. ft)

 A. 560 Commissioners

 B. 545 Commissioners

Affordable Housing Principles

The City's Official Plan supports the development of complete communities, including a full range of housing to support people living in their neighbourhoods throughout their lives. Proposed mixed-use precincts will be developed as complete, inclusive communities. The Port Lands, as part of the Central Waterfront Secondary Plan, will require 25% of all housing to be affordable, with 20% dedicated to affordable rental housing and 5% modest-sized ownership units. The following affordable housing principles will guide the provision of affordable housing within mixed-use precincts.

Timeliness: Affordable units delivered at the pace of market development.

Permanency: Affordable housing as a durable community benefit.

Flexibility: Combinations of delivery methods to achieve a lasting mix and balance between timeliness and permanency.

Clarity: Criteria to inform decisions on delivery methods and implementation at the precinct and site level; as well as a framework that provides a consistent approach to achieve the City's affordable housing objectives.

CHARACTER+PLACE

PORT LANDS ENERGY PLAN

The Port Lands Energy Plan, at a high level, explores potential opportunities and approaches that will reduce energy usage and generate renewable energy within the area. The goal is to eventually achieve net zero energy imported into the Port Lands with a low carbon (CO2) footprint.

Creating a Net Zero District

Revitalization and redevelopment of the Port Lands presents energy opportunities not found elsewhere in Toronto. The potential for a sustainable series of precincts is enhanced by the unique characteristics of this waterfront district, including:

Regeneration and Renewal: Buildings and infrastructure can be designed to optimize energy performance and incorporate low-carbon solutions.

Massive Scale: Development will create 2 million square metres of new floor area and an estimated population of 18-25,000 residents and 25-30,000 employees.

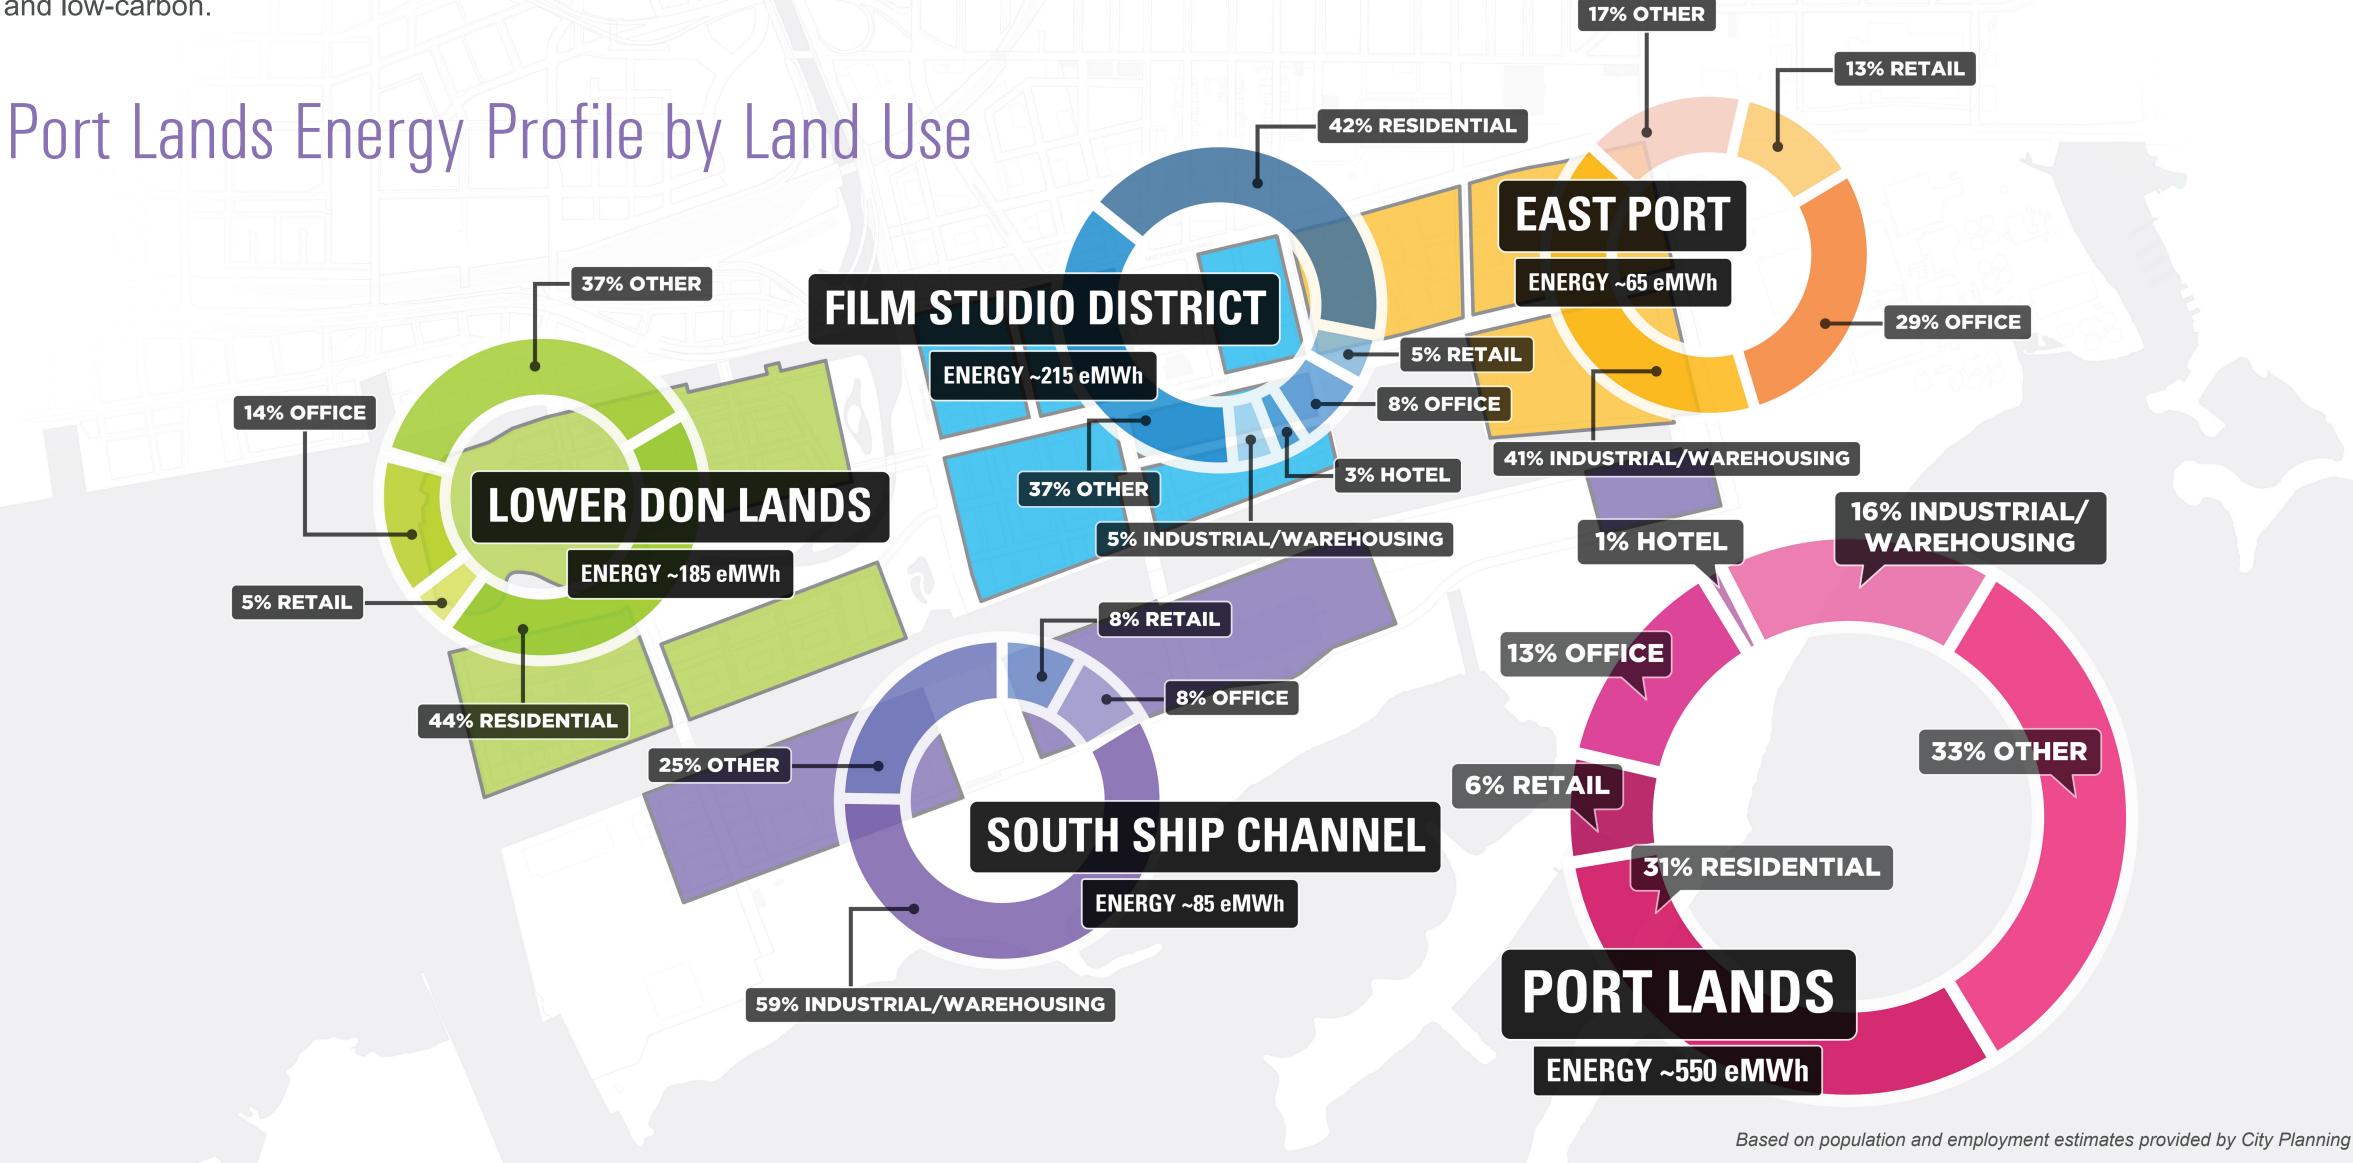

A Diverse Mix of Uses: Residential, office, retail, industrial, port activities, sports and recreational facilities, film studios and more.

Local and Low Carbon: Net zero occurs when energy supply equals demand. The Energy Plan takes this one step further by interpreting net zero as energy solutions that are both local and low-carbon.

The Port Lands Energy Profile

The Port Lands Energy Profile, which provides an overview of how much energy the Port Lands will need, was calculated based on development projections.

It's anticipated that the Port Lands, at full buildout, will add approximately 550 Megawatt hours (eMWh) of energy demand to the City, resulting in an increase of 88,000 tonnes of CO2. The Port Lands Energy Profile Map provides an overview of projected energy use of each district by land use. The Energy Profile, is the starting point for exploring approaches to get to net zero.

Getting to Net Zero in the Port Lands

Achieving net zero in the Port Lands will require critical decisions related to building energy use intensities, energy sharing networks and low carbon infrastructure opportunities. The following net zero guidelines will require flexibility over time to adapt to changing conditions, new technologies and building, site-specific and precinct-level opportunities.

- High performance buildings: Reduced energy demand through aggressive low energy use intensities (EUI) and passive design.
- Building scale renewable energy: Solar photovoltaic cells, wind, biomass, and/or geothermal incorporated into the building.
- District scale renewable energy: Connected systems for heat recovery, lake water cooling and thermal networks.
- Transportation: Active transportation and electric vehicle infrastructure.
- Resilience: Backup power for residential and mixed-use buildings, as well as community reception centres.
- Education: Raise awareness of energy conservation through education.

SUSTAINABILITY + INNOVATION

The Port Lands is envisioned to be a sustainable and resilient place where innovative approaches are taken to celebrate the communities, employment areas and people of the waterfront, preserve and enhance natural ecosystems, conserve natural resources, minimize environmental impacts, reduce waste, build wisely and respond to climate change.

Ecological Integrity

For the Port Lands, ecological integrity focuses on enhancing and expanding natural heritage assets; minimizing the use of water, energy and materials; undertaking a disciplined approach to land use; increasing waste diversion rates; addressing contamination issues; and considering innovative approaches and technologies that improve environmental quality.

Human Health + Well-being

The Port Lands will showcase inclusive, diverse, active and equitable living designed for everyone. Residents from diverse backgrounds and means will become active members of the new mixed-use precincts. Healthy lifestyles will be facilitated through planning decisions, including those regarding community infrastructure, active transportation options and an extensive park, recreation and trail system that connects the Port Lands to the rest of the City.

HUMAN HEALTH + WELL-BEING

MOBILITY + ACCESS

ECOLOGICAL INTEGRITY

INNOVATION + ECONOMY

Mobility + Access

The Port Lands will be a place that encourages walking, cycling and transit use as the primary travel modes. Sustainable mobility infrastructure will be designed to be safe, convenient and attractive, while improving public health and well-being, reducing air pollution and greenhouse gas emissions. Compact, complete mixed-use communities in close proximity to several employment districts will further facilitate access through active transportation options.

Net Zero District

The Port Lands will strive to be a net zero energy and emissions district where no more energy is consumed than is supplied.

This will be achieved through a number of low-carbon strategies at the building, block and precinct-level identified in the Port Lands Energy Plan.

CLIMATE CHANGE

Climate Change

The Port Lands Planning Framework represents a locally appropriate and innovative approach to planning for a changing climate by reducing greenhouse gas emissions through compact community design, mobility and access choices, and renewable energy solutions. The Planning Framework takes a proactive approach to climate change mitigation and resiliency through investment in green infrastructure, flood mitigation, biodiversity structural layers and the creation of efficient, compact complete communities.

Innovation + Economy

The strength of the Port Lands Planning
Framework is the diversity of employment
districts that are in close proximity to new
mixed-use communities. Maintaining
important industrial and port activities while
creating new employment opportunities is
a key priority of this Plan. Efforts to attract
the best and most innovative companies
and people; support intelligent community
networks; develop valuable public
amenities; and create diverse and inventive
districts will contribute to the economic
success of the Port Lands.

COHABITATION + BIODIVERSITY

The Port Lands has extensive habitat and wildlife in the "wilds" south of Unwin Avenue, with connections to the Don River ravine system. Cohabitation focuses on creating a place where nature is interwoven into the urban environment, encouraging and enhancing biodiversity at various scales as development occurs.

Biodiversity Working Group

The Working Group was established to collaborate, discuss and identify the elements needed for a robust biodiversity framework for the Port Lands. The Working Group consisted of representatives from the City, Waterfront Toronto, Toronto and Region Conservation Authority, academics from the ROM and York University, advisory committees and organizations with a vested interest in advancing biodiversity objectives in the city.

Three Themes

Enhance: Expand the urban tree canopy and increase structural complexity and species diversity.

Connect: Create ecosystem connectivity through linking green infrastructure and major natural heritage areas.

Design: Integrate habitat opportunities into the urban fabric through the built form.

The Biodiversity Framework

The Framework is organized by five structural layers that represent a range of habitat and movement opportunities at various scales. The most effective approach to support biodiversity is linking high quality habitat using a number of connections and corridors that allow wildlife movement.

Major Natural Systems are large north-south and east-west biodiverse landscapes that comprise high quality terrestrial, wetland and aquatic habitat.

Other Parks and Open Spaces are larger spaces that have greater opportunity for habitat creation to supplement the Major Natural Systems. Over time, these parks and open spaces could evolve into more desirable habitats.

Liminal Linkages are the corridors that will provide the opportunity for species movement between the structural layers. The establishment of strategic habitat corridors will ensure the integration of the Port Lands natural heritage with the City's existing and future open space network.

Nodes and Patches consist of local parks, courtyards and outdoor publicly accessible private spaces that will form a finer grained series of "biodiversity islands".

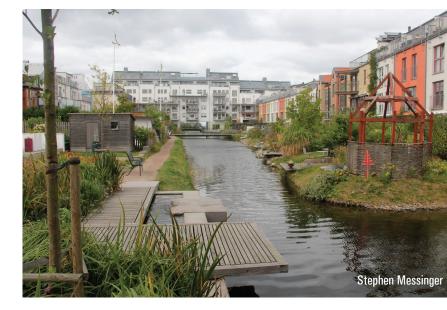

Naturalized Development are developments that include "natural" elements within building and site design that mimic natural habitat and functions and further facilitate a robust, inter-connected urban ecology. Examples include permeable pavement, green roofs, food gardens, natural landscaping and water features.

Arts and culture will play a central role in representing the many facets of the Port Lands, including its history, ecology, waterscape, economy and emerging communities. Public art will help to create a sense of place in the diverse and distinct precincts in the Port Lands.

Public Art Principles

Unique Sites: Public art in the Port Lands will be unique and significant to the area. Art work will capitalize on the area's characteristics, build on its existing assets and will be sensitive to site-specific conditions.

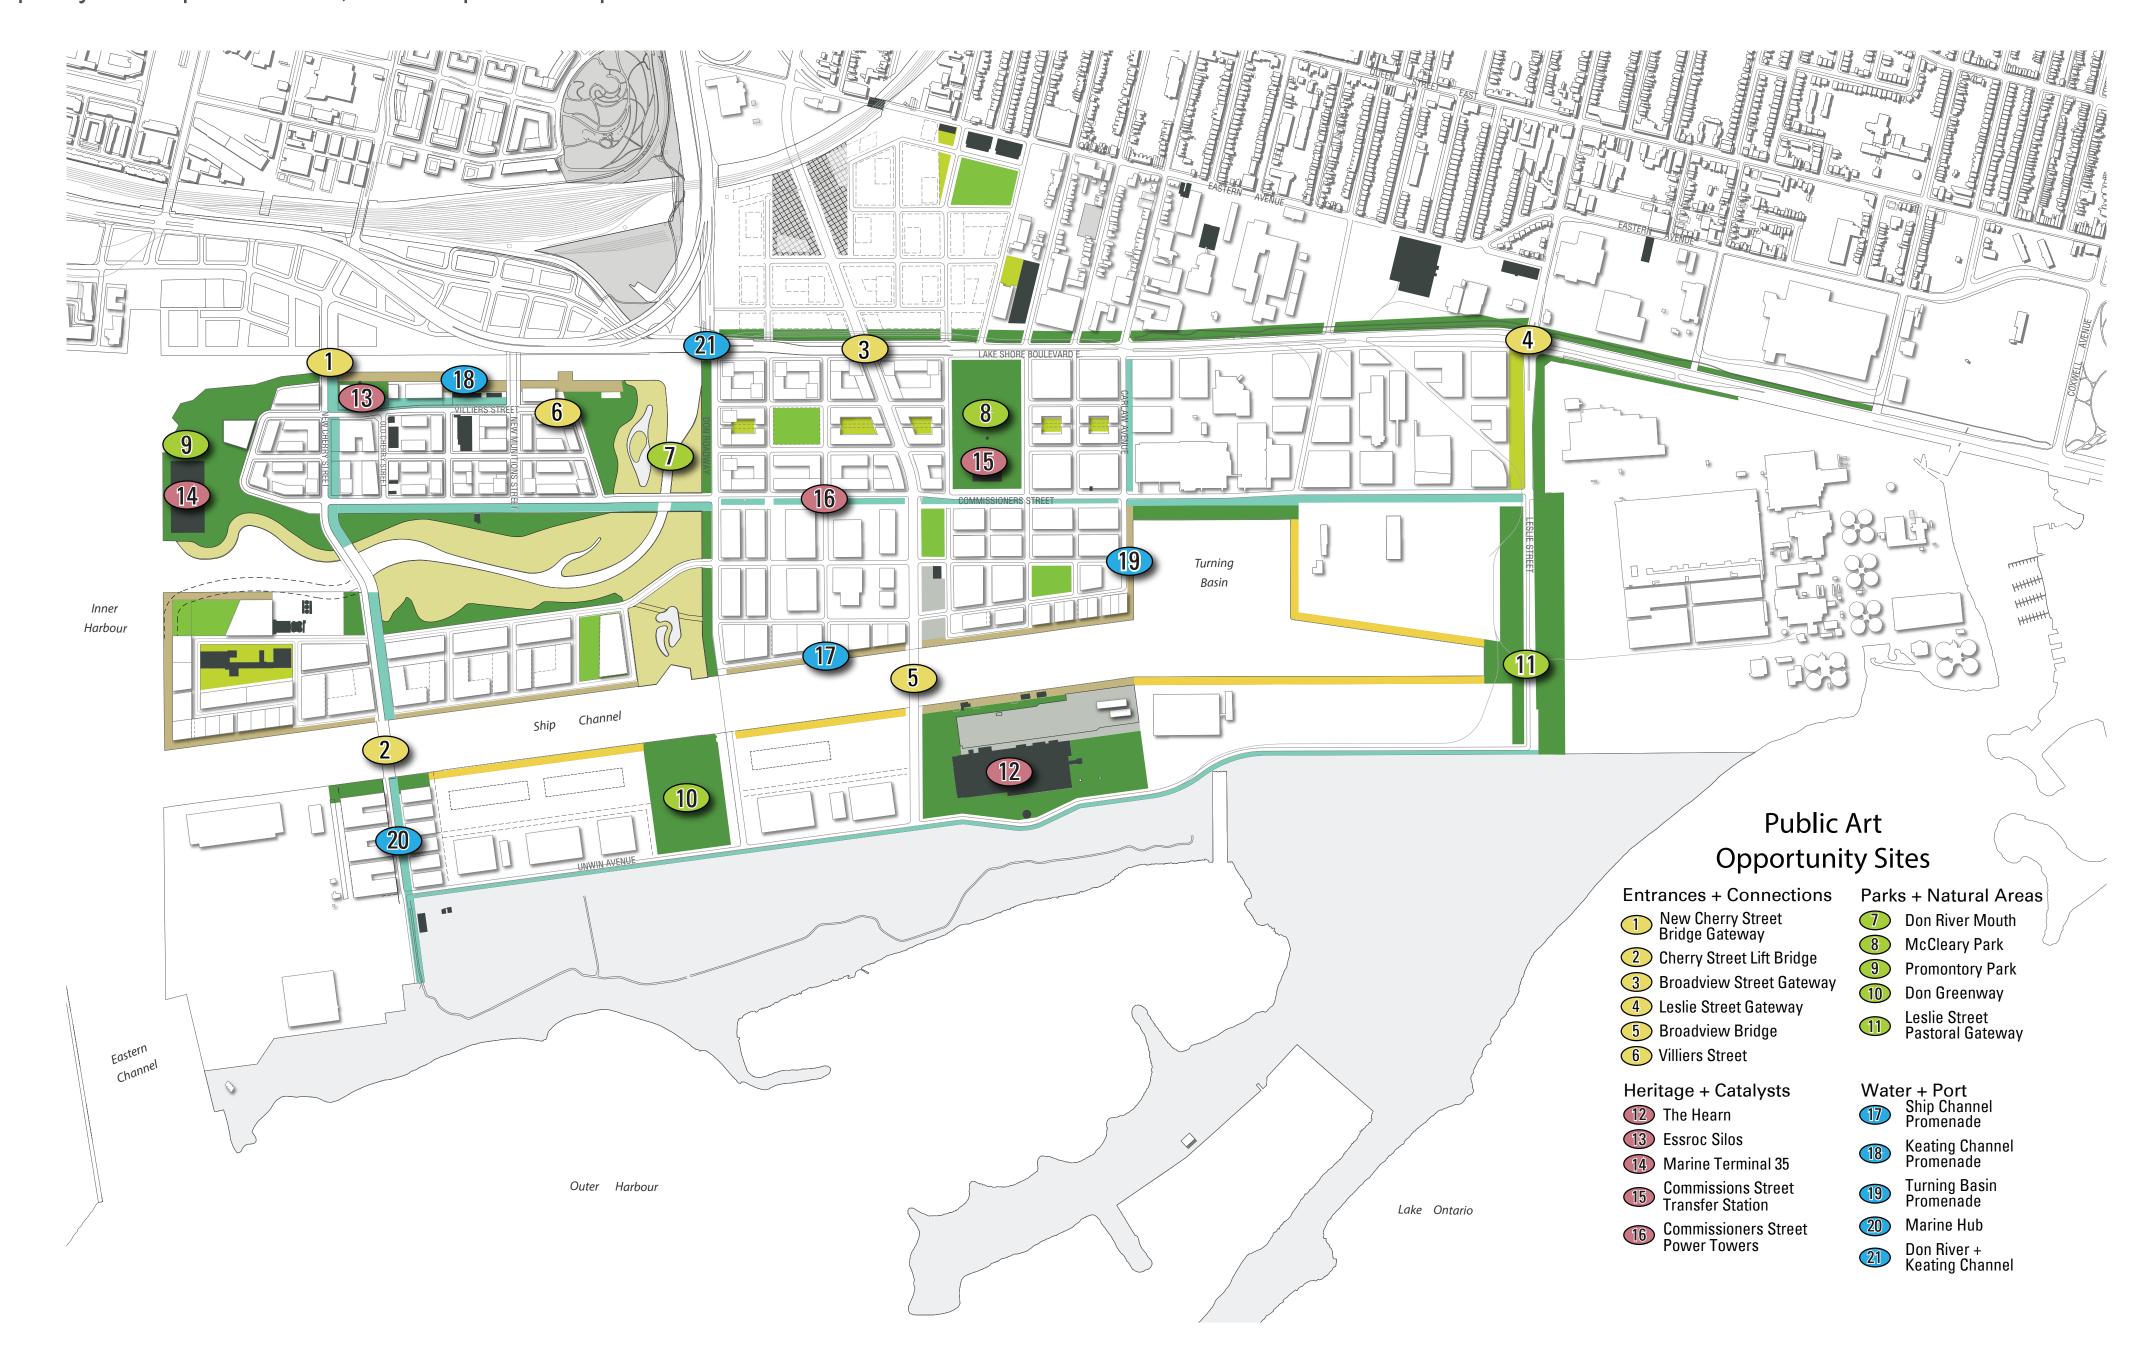

Dialogue Between Pubic Art and Audience: Dialogues between artists and their audiences, conducted in the streets and open spaces of the Port Lands via the medium of art installations, will be valued for the complexity and interest they bring to the public realm.

Excellence: Public art in the Port Lands will be of the highest calibre and will be produced using innovative and sustainable practices reflective of the Port Lands Framework Plan's strong emphasis on environmental responsibility.

Enhancing the Public Realm: Public art will be located in the public realm to enhance and beautify the streets, parks and open spaces; contribute to the unique character of each precinct; promote an awareness and enjoyment of art; and complement existing and future creative industries that will locate in the area.

Public Art Opportunity Sites

There will be numerous opportunities to embed public art in the public realm over time as the Port Lands evolves. Potential sites have been identified including gateways, landmarks, and iconic locations. Art installations in these or similar places, possibly inspired by the Port Lands' monumental industrial architecture or its vigorously regenerating natural environment, will meaningfully enhance the quality of the public realm, and the public's experience of the Port Lands.
